Full-Time Clinical Research Assistant: Data Management & Coding Focus

Brown Alpert Medical School
BA/BS Required

*Be part of cutting-edge research
*Work alongside expert faculty and staff
*Build your resume for graduate/medical/nursing school

This is a full-time research position involving a longitudinal studies of smoking and depression during pregnancy and fetal and infant behavior and biology. Position also involves the opportunity to be uniquely trained in placenta collection, as well as fetal and infant neurobehavioral coding.

The research assistant would be heavily involved with dataset management, data entry, and data analysis. Additional responsibilities include assistance with recruitment and screening. Research experience, background in statistics/SPSS and REDCap data entry/development is an asset. Evening and weekend availability and reliable transportation are required.

Many opportunities to conduct independent research, submit presentations to conferences, prepare papers for publication.

Applications from women and minority members are encouraged. To be considered for this position, please send resume and cover letter to Alana Corey.
