SCHOLARLY PROFILE

My research and teaching focus on applying psychological theory to key societal challenges. I am currently working in two broad areas of applied research. With the *Children's Memory Project*, my students and I seek to improve children's recall of experienced events by focusing on how adults behave in the interview setting. Much of my work in this area has revolved around how the Cognitive Interview can assist social workers, and police in facilitating child witness recall as well as doctors and nurses interested in gaining accurate, detailed, information about a child's symptoms. I also direct the *Conservation Psychology Lab*, where my team and I focus on the antecedents of pro-environmental attitudes and behaviors (e.g., life experience, connection with nature, and psychological need fulfillment) as well as techniques to nudge conservation behavior (e.g., reductions in electric use in the dorms). I am fortunate to teach research methodology, as well as applied courses on how psychological theory can inform our understanding of human behavior in the legal system, the work place, and for conservation behaviors.
